Sequence 12, Application US/08465783

Patent No. 5700682

PATENT NORMATION:
APPLICANT: Mak, Paul
APPLICANT: Karathanasis, Sotirios K.
TITLE OF INVENTION: Mechanism-Based Screen for Retinoid X
TITLE OF SEQUENCES:
NUMBER OF SEQUENCES: 19
CORRESPONDENCE ADDRESS:
ADDRESSEE: American Cyanamid Company
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Length 19;

Patent No. 6204000

GENERAL INFORMATION:

APPLICANT: Jord, Jin-Tang, Barrett,

APPLICANT: J. Carl; Lamb, Patricia W.; Isaacs, John T.

TITLE OF INVENTION: DIAGNOSTIC METHODS AND

TITLE OF INVENTION: HUMAN METASTASIS SUPPRESSOR GENE KALI

NUMBER OF SEQUENCES: 20

CORRESPONDENCE ADDRESS:

ADDRESSEE: MORGAN & FINNEGAN, L.L.P.

Sequence 31 Application US/08927561

Patent No. 5874567

GENERAL INFORMATION:

APPLICANT: Smith, Larry J.

TITLE OF INVENTION: Therapeutic Oligonucleotides

TITLE OF INVENTION: Targeting the Human MDR1 and MRP Genes

TITLE OF SEQUENCES: 114

CORRESPONDENCE 3: 114

CORRESPONDENCE ADDRESS:

ADDRESSEE: Dann, Dorfman, Herrell and Skillman

STREE: PA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 84, Application US/07974409C

Sequence 84, Application US/07974409C

Patent No. 6300058

APPLICANT Atitaya, Tatsuo

APPLICANT Atitaya, Masato

APPLICANT: Cooper, Allan

TITLE OF INVENTION: FOR METHOD AND REAGENT

TITLE OF INVENTION: FOR MEASURING MESSENGER RNA

NUMBER OF SEQUENCES: 457

CORRESPONDENCE ADDRESS:

ADDRESSEE: Knobbe, Martens, Olson, and Bear

STREET: 620 Newport Center Dr. Sixteenth Floor

CITY: Newport Beach

CITY: Newport Beach

CITY: USA

CONTRY: USA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          COMPUTER READABLE FORM:

1 Sequence 627 Application US/09476387

Patent No. 6617438

GENERAL INFORMATION

APPLICANT: Ribozyme Pharmaceuticals, Inc.

APPLICANT: Readenty, Amber

APPLICANT: Beadenty, Amber

APPLICANT: Adamic, Jasenka Matulic

APPLICANT: Adamic, Jasenka Matulic

APPLICANT: Sweedler, Daven

APPLICANT: Sweedler, Daven

APPLICANT: Sweedler, Daven

APPLICANT: Sweedler, Daven

APPLICANT: Shawn

TITLE OF INTANTION: Nucleotide Triphosphate and their Incorporation into Oligonucleoti

FILE REFERENCE: MBH800-831-C (149/073)

CURRENT APPLICATION NUMBER: 09/476,387

CURRENT APPLICATION NUMBER: 09/301,511

PRIOR APLICATION NUMBER: 09/186,675

PRIOR APLICATION NUMBER: 09/186,675

PRIOR FILING DATE: 1998-11-04

PRIOR APLICATION NUMBER: 60/083,727

PRIOR APPLICATION NUMBER: 60/083,727

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      US-08-363-985-86/c

Sequence 86, Application US/08363585

Patent No. 5683872

GENERAL INFORMATION:
APPLICANT: Rudert, William A.
APPLICANT: Rudert, William A.
TITLE OF INVENTION: Polymers of Oligonucleotide Probes
TITLE OF INVENTION: As The Bound Ligands For Use In Reverse
TITLE OF INVENTION: Dot Blots

VUMBER OF SEQUENCES: 112
CORRESPONDENCE ADDRESS:
ADDRESSE: 112
ADDRESSE: University of Pittsburgh
STREET: Office of Intellectual Property
STREET: 911 William Pitt Union
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Length 18;

Patent No. 5683987
GENERAL INFORMATION:
TITLE OF INVENTION: Therapeutic Oligonucleotides
TITLE OF INVENTION: Trargeting the Human MDR1 and MRP Genes
NUMBER OF SEQUENCES: 114
CORRESPONDENCE ADDRESS:
ADDRESSEE Dann, Dorfman, Herrell and Skillman
STREET: 1601 Market Street Suite 720
COTTY: Philadelphia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match 1.5%; Score 12.4; DB 1; Length 18; Best Local Similarity 92.9%; Pred. No. 4.6e+02; Matches 13; Conservative 0; Mismatches 1; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC Compatible
OPERATING SYSTEM: PC-COMPATIBLE
OPERATING SYSTEM: PC-COS/MS-DOS
SOFTWARE: PACENTIN Release #1.0, Version #1.30
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/487,141B
FILING DATE: 07-JUN-1995
CLASSIPICATION: 336
PRIOR PAPELICATION DATA:
APPLICATION NUMBER: US 08/379,180
FILING DATE: 12-JUL-1994
ATTORNEY/AGENT INFORMATION:
NAME: Hagan, Patrick J.
REGISTRATION NUMBER: 53082C
TELEPHONE: (215)563-4100:
TELEPHONE: (215)563-4100:
FILING DATE: 07-UN-1995
CLASSIFICATION: 536
PRIOR APPLICATION DATA:
APPLICATION NUMBER: US 08/379,180
FILING DATE: 12-UL-1994
ATTORNEY/AGENI INFORMATION:
NAME: Hagan, Patrick J.
REGISTAATION NUMBER: 27,643
REFERENCE/DOCKET NUMBER: 27,643
REFERENCE/DOCKET NUMBER: 63082C
TELECOMMUNICATION INFORMATION:
TELEPHONE: (215)563-4100
TELEPHONE: (215)563-4100
TELEPHONE: (215)563-4044
INFORMATION FOR SEQ ID NO: 29:
SEQUENCE CHARACTERISTICS:
LENGTH: 18 base pairs
TYPE: nucleic acid
STRANDENESS: single

1 Sequence 60, Application US/08258287B

2 Patent No. 6083735

3 Farent Naura, Masayuki

3 TITLE OF INVENTION: Programmed Cell Death Genes and Proteins NUMBER OF SEQUENCES: 85

3 CORRESPENDENCE ADDRESS:

4 ADDRESSEE: Sterne, Kessler, Goldstein & Fox

5 STREET: 1100 New York Avenue, Suite 600

6 CITY: Washington

7 STATE: D.C.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match
                                                 Sequence 2, Application US/08809297

Patent No. 5948650

GENERAL INFORMATION:
APPLICANT: AZAKI, SHIGEKI
APPLICANT: TSUCHIYA, YOHICHI
ITILE OF INVENTION: GENETIC VARIETY IDENTIFYING METHOD IN
TITLE OF INVENTION: 40PS
NUMBER OF SEQUENCES: 48
CORRESPONDENCE ADDRESS:
ADDRESSEE: OBLON, SPIVAK, MCCLELLAND, MAIER & NEUSTADT,
ADDRESSEE: P.C.
STREET: 1755 SOUTH JEFFERSON DAVIS HIGHMAY, SUITE 400
CITY ARLINGTON
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         RESULT 446
US-08-738-922-4
US-08-738-922-4
; Sequence 4, Application US/08738922
; Patent No. 5958686
; GENERAL INFORMATION:
    APPLICANT: Huo-Shu H. Houng
    TITLE OF INVENTION: A Simple PCR Technique for Detecting
    TITLE OF INVENTION: and Differentiating Bacterial Pathogens
    NUMBER OF SEQUENCES: 6
    CORRESPONDENCE ADDRESS:
    ADDRESSEE: John Moran
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Length 19
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WEDIUM TYPE: Floppy disk
